

Lab Assignment 09

Inspiring Excellence

Course Code:	CSE111
Course Title:	Programming Language II
Topic:	Polymorphism
Number of Tasks:	10

Task 1

1.a. Write the **Pokemon** class so that the following code generates the output below:

Driver Code	Output
<pre>public class PokemonTester{ public static void main(String[] args){ Pokemon pikachu = new Pokemon("Pikachu"); pikachu.attack(); pikachu.attack("Thunderbolt"); pikachu.attack("Iron Tail", 90); } }</pre>	<pre>Pikachu attacks with a basic move! Pikachu uses Thunderbolt! Pokemon uses Iron Tail with power 90!</pre>

1.b. What type of polymorphism is depicted in the code above?

Task 2

Write the **Mango** and the **Jackfruit** classes derived from **Fruit** class so that the following code generates the output below:

Parent Class	
<pre>public class Fruit{ private boolean formalin = false; private String name = ""; public Fruit(boolean formalin, String name){ this.formalin = formalin; this.name = name; } public String getName(){ return name; } public boolean hasFormalin(){ return formalin; } }</pre>	
Driver Code	Output
<pre>public class FruitTester{ public static void testFruit(Fruit f){ System.out.println("----Printing Detail-----"); if(f.hasFormalin()){ System.out.println("Do not eat the "+f.getName()+"."); System.out.println(f); }else{ System.out.println("Eat the "+f.getName()+"."); System.out.println(f); } } public static void main(String [] args){ Mango m = new Mango(); testFruit(m); Jackfruit j = new Jackfruit(); testFruit(j); } }</pre>	<pre>----Printing Detail----- Do not eat the Mango. Mangos are bad for you ----Printing Detail----- Eat the Jackfruit. Jackfruits are good for you</pre>

<pre> } } </pre>	
------------------	--

Task 3

Write the **CSEStudent** and **CSE111Student** classes derived from **Student** class so that the following code generates the output below:

Parent Class	
<pre> public class Student{ public String msg = "I love BU"; public String shout(){ return msg; } } </pre>	
Driver Code	Output
<pre> public class StudentTester{ public static void printShout(Student s){ System.out.println("-----"); System.out.println(s.msg); System.out.println(s.shout()); } public static void main(String [] args){ Student s = new Student(); CSEStudent cs = new CSEStudent(); CSE111Student cs111 = new CSE111Student(); System.out.println(s.msg); System.out.println(cs.msg); System.out.println(cs111.msg); printShout(s); printShout(cs); printShout(cs111); } } </pre>	<pre> I love BU I want to transfer to CSE I love Java Programming ----- I love BU I love BU ----- I love BU I want to transfer to CSE ----- I love BU I love Java Programming </pre>

Task 4

Write the **PlatinumCard** and **SignatureCard** classes derived from **CreditCard** class so that the following code generates the output below.

Note: Platinum card users initially have 100 reward points and will get 2 reward points for spending 100 taka each. Signature card users initially have 200 reward points and will get 4 reward points for spending 100 taka each. Signature card users are allowed to bring upto 5 companions at lounges.

Parent Class	
<pre> public class CreditCard { public String cardHolder; public String accountNo; public int rewardPoints; public CreditCard(String cardHolder, String accountNo, int rewardPoints){ this.cardHolder = cardHolder; this.accountNo = accountNo; this.rewardPoints = rewardPoints; } public void cardDetails(){ System.out.println("Card Holder Name: " + cardHolder); System.out.println("Account Number: " + accountNo); System.out.println("Reward point gained: " + rewardPoints); } } </pre>	
Driver Code	Output
<pre> public class CardTester { public static void main(String[] args) { CreditCard card1 = new PlatinumCard("Ali", "345 127"); CreditCard card2 = new SignatureCard("Rahul", "514 123"); CreditCard card3 = new SignatureCard("Rohan", "147 965"); CreditCard [] cards = {card1, card2, card3}; for (int i = 0; i<cards.length; i++) { System.out.println("====="); if (cards[i] instanceof SignatureCard) { SignatureCard new_card = (SignatureCard) cards[i]; new_card.spendCash(500); } else if (cards[i] instanceof PlatinumCard) { PlatinumCard new_card = (PlatinumCard) cards[i]; new_card.spendCash(200); } System.out.println("====="); cards[i].cardDetails(); } } } </pre>	<pre> ===== Previous Reward Points: 100 Reward points after spending 200 taka: 104 ===== Card Holder Name: Ali Account Number: 345 127 Reward point gained: 104 ===== Previous Reward Points: 200 Reward points after spending 500 taka: 220 ===== Card Holder Name: Rahul Account Number: 514 123 Reward point gained: 220 Possible Number of Companions for Lounge: 5 ===== Previous Reward Points: 200 Reward points after spending 500 taka: 220 ===== Card Holder Name: Rohan Account Number: 147 965 Reward point gained: 220 Possible Number of Companions for Lounge: 5 </pre>

Task 5

Design a set of classes for a Fantasy Game Character System. There is a parent class called **Character**. From it, there are two different child classes: **Warrior** and **Mage**. Additionally, there is a subclass called **Paladin** that extends **Warrior**.

Each character has:

- name (String)
- level (int)

Lastly, you need to Override the `.equals()` method inside the parent class

Parent Class		
<pre>public class Character { public String name; public int level; public Character(String name, int level) { this.name = name; this.level = level; } public void specialMove() { System.out.println("Character uses a generic move."); } // Override the .equals() method }</pre>		
Driver Code	Output	
<pre>public class GameTester { public static void main(String[] args) { Character c1 = new Paladin("Arthur", 10); Character c2 = new Mage("Merlin", 12); Character c3 = new Warrior("Leon", 10); c1.specialMove(); c2.specialMove(); c3.specialMove(); if (c1 instanceof Paladin) { Paladin p = (Paladin) c1; p.specialMove(); } Warrior w1 = new Warrior("Leon", 10); System.out.println("c3 equals w1? " + c3.equals(w1)); Mage m1 = new Mage("Merlin", 15); System.out.println("c2 equals m1? " + c2.equals(m1)); } }</pre>	<pre>Arthur unleashes a holy strike! Merlin casts a powerful fireball! Leon performs a heavy sword slash! Arthur unleashes a holy strike! c3 equals w1? true c2 equals m1? false</pre>	

Task 6

Write the Garage, Bike and Car class. **Car**, **Bike** are child classes of **Vehicle** class. But **Garage** is neither a parent nor a child class. The Garage class has **two arrays as instance variables** called *cars* and *bikes* that can store **Car and Bike objects**.

Hint: In this task you'll need to use the **instanceof** keyword and **downcasting**.

Vehicle Class

```
public class Vehicle {  
    private String brand;  
    private int year, wheels;  
  
    public Vehicle(String b, int y){  
        this.brand = b;  
        this.year = y;  
    }  
  
    public String getBrand(){  
        return this.brand;  
    }  
  
    public int getYear(){  
        return this.year;  
    }  
  
    public void setWheels( int w ){  
        this.wheels = w;  
    }  
  
    public int getWheels(){  
        return this.wheels;  
    }  
  
    public String toString(){  
        return "Brand: "+this.brand+", Year: "+this.year+", Wheels: "+this.wheels;  
    }  
}
```

DRIVER CODE	OUTPUT
<pre> Garage g = new Garage(2, 3); System.out.println("=====0====="); Vehicle vC1 = new Car("Ford", "Mustang", 2022, 2, 4, false); Vehicle vC2 = new Car("Tesla", "Model S", 2025, 4, 4, true); Vehicle vC3 = new Car("Reliant", "Robin", 1981, 2, 3, false); System.out.println("=====1====="); System.out.println(vC1); System.out.println("=====2====="); g.addVehicle(vC1); g.addVehicle(vC2); g.addVehicle(vC3); System.out.println(g.cars[1]); System.out.println("=====3====="); g.cars[0].startAutoPilot(); g.cars[1].startAutoPilot(); System.out.println("=====4====="); Vehicle vB1 = new Bike("Honda", "Gold Wing", 2022, 3, true); System.out.println(vB1); g.addVehicle(vB1); System.out.println("=====5====="); Vehicle vB2 = new Bike("Royal Enfield", "Classic 350", 2021, 2, false); g.addVehicle(vB2); System.out.println(g.bikes[1]); System.out.println("=====6====="); Vehicle vB3 = new Bike("Harley-Davidson", "Street 750", 2022, 2, false); g.addVehicle(vB3); Vehicle vB4 = new Bike("Yamaha", "MT-15", 2023, 2, false); g.addVehicle(vB4); System.out.println("=====7====="); g.bikes[0].doAWheelie(); g.bikes[1].doAWheelie(); </pre>	<pre> Welcome to the Garage! Car Capacity: 2 Bike Capacity: 3 =====0===== =====1===== Car Brand: Ford, Year: 2022, Wheels: 4, Model: Mustang, Doors: 2, AI: false =====2===== A Ford CAR has been added to the Garage A Tesla CAR has been added to the Garage Can't add more Cars! Capacity: 2 Car Brand: Tesla, Year: 2025, Wheels: 4, Model: Model S, Doors: 4, AI: true =====3===== Ford:Mustang has NO AutoPilot Tesla:Model S AutoPilot Started =====4===== Bike Brand: Honda, Year: 2022, Wheels: 3, Model: Gold Wing, SideCar: true A Honda BIKE has been added to the Garage =====5===== A Royal Enfield BIKE has been added to the Garage Bike Brand: Royal Enfield, Year: 2021, Wheels: 2, Model: Classic 350, SideCar: false =====6===== A Harley-Davidson BIKE has been added to the Garage Can't add more bikes! Capacity: 3 =====7===== Wheelie Failed. Honda:Gold Wing has SideCar Royal Enfield:Classic 350 is doing Wheelie!! </pre>

Task 7

1	public class Gandalf {
2	public void method1(){
3	System.out.println("Gandalf 1");
4	}
5	
6	public void method2(){
7	System.out.println("Gandalf 2");
8	method1();
9	}
10	}
11	public class Bilbo extends Gandalf{
12	public void method1(){
13	System.out.println("Bilbo 1");
14	}
15	}
16	public class Gollum extends Gandalf{
17	public void method3(){
18	System.out.println("Gollum 3");
19	}
20	}
21	public class Frodo extends Bilbo{
22	public void method1(){
23	System.out.println("Frodo 1");
24	super.method1();
25	}
26	
27	public void method3(){
28	System.out.println("Frodo 3");
29	}
30	}

Assuming the following variables have been defined:

```
Gandalf var1 = new Frodo();
Gandalf var2 = new Bilbo();
Gandalf var3 = new Gandalf();
Object var4 = new Bilbo();
Bilbo var5 = new Frodo();
Object var6 = new Gollum();
```

In the table below,

- The output produced by the statement in the left-hand column, should be written in the right-hand column
- If the statement produces more than one line of output, indicate the line breaks with slashes as in "a/b/c" to indicate three lines of output with "a" followed by "b" followed by "c".
- If the statement causes an error, fill in the right-hand column with either the phrase "compiler error" or "runtime error" to indicate when the error would be Detected.

	Statement	Output
1	var1.method1();	
2	var2.method1();	
3	var4.method1();	
4	var6.method1();	
5	var1.method2();	
6	var3.method2();	
7	var4.method2();	
8	var5.method2();	
9	var6.method2();	
10	((Frodo)var4).method3();	
11	((Frodo)var6).method2();	
12	((Gollum)var1).method3();	
13	((Gollum)var4).method1();	
14	((Gandalf)var1).method2();	
15	((Frodo)var4).method1();	
16	((Gollum)var6).method2();	
17	((Gandalf)var2).method1();	
18	((Bilbo)var6).method2();	
19	((Frodo)var1).method3();	
20	((Gandalf)var5).method3();	

Task 8

1	public class Sue {
2	void method1() {
3	System.out.println("sue 1");
4	}
5	void method3() {
6	System.out.println("sue 3");
7	}
8	}
9	
10	public class Blue {
11	void method1() {
12	System.out.println("blue 1");
13	method3();
14	}
15	void method3() {
16	System.out.println("blue 3");
17	}
18	}
19	
20	public class Moo extends Blue {
21	void method2() {
22	super.method3();
23	System.out.println("moo 2");
24	this.method3();
25	}
26	void method3() {
27	System.out.println("moo 3");
28	}
29	}
30	
31	public class Crew extends Moo {
32	void method1() {
33	System.out.println("crew 1");
34	}
35	void method3() {
36	System.out.println("crew 3");
37	}
38	}

Assuming the following variables have been defined:

```

Moo var1 = new Crew();
Blue var2 = new Moo();
Object var3 = new Sue();
Sue var4 = new Sue();
Blue var5 = new Crew();
Blue var6 = new Blue();

```

In the table below,

- The output produced by the statement in the left-hand column, should be written in the right-hand column
- If the statement produces more than one line of output, indicate the line breaks with slashes as in "a/b/c" to indicate three lines of output with "a" followed by "b" followed by "c".
- If the statement causes an error, fill in the right-hand column with either the phrase "compiler error" or "runtime error" to indicate when the error would be detected.

	Statement	Output
1	var1.method1();	
2	var2.method1();	
3	var3.method1();	
4	var4.method1();	
5	var5.method1();	
6	var6.method1();	
7	var1.method3();	
8	var2.method3();	
9	var3.method3();	
10	((Blue)var1).method1();	
11	((Crew)var1).method2();	
12	((Sue)var1).method3();	
13	((Blue)var3).method1();	
14	((Crew)var3).method1();	
15	((Sue)var3).method3();	
16	((Moo)var2).method2();	
17	((Crew)var3).method2();	
18	((Moo)var5).method2();	
19	((Moo)var6).method2();	
20	((Moo)var2).method1();	

Task 9

1	public class Foo {
2	String name = "foo";
3	public void call1() {
4	System.out.println("Foo 1");
5	}
6	public void call2() {
7	call1();
8	System.out.println("Foo 2");
9	}
10	}
11	
12	public class Bar extends Foo {
13	public void call2() {
14	System.out.println("Bar 2");
15	}
16	public void call3() {
17	System.out.println("Bar 3");
18	}
19	}
20	
21	public class Buzz extends Bar {
22	String name = "Buzz";
23	public void call1() {
24	System.out.println("Buzz 1");
25	}
26	public void call4() {
27	call3();
28	System.out.println("Buzz 4");
29	}
30	}
31	public class Bux extends Foo {
32	String name = "Bux";
33	public void call1() {
34	System.out.println("Bux 1");
35	}
36	public void call3() {
37	System.out.println("Bux 3");
38	}
39	}

Assuming the following variables have been defined:

```
Foo foo1 = new Foo();
Bar bar1 = new Bar();
Bux bux1 = new Bux();
Foo foo2 = new Buzz();
Bar bar2 = new Buzz();
Object obj1 = new Foo();
```

In the table below,

- The output produced by the statement in the left-hand column, should be written in the right-hand column
- If the statement produces more than one line of output, indicate the line breaks with slashes as in "a/b/c" to indicate three lines of output with "a" followed by "b" followed by "c".
- If the statement causes an error, fill in the right-hand column with either the phrase "compiler error" or "runtime error" to indicate when the error would be detected.

	Statement	Output
1	bar1.call1();	
2	foo2.call1();	
3	foo2.call2();	
4	bar2.call3();	
5	System.out.println(bar1.name);	
6	System.out.println(bar2.name);	
7	System.out.println(((Buzz)bar2).name);	
8	((Buzz)bar1).call4();	
9	((Bar)foo1).call3();	
10	((Foo)bux1).call1();	
11	((Bux)foo1).call1();	
12	bux1.call1();	
13	bux1.call2();	
14	((Foo)foo2).call2();	
15	((Buzz)obj1).call3();	
16	((Buzz)obj1).call2();	
17	((Bux)foo2).call2();	
18	((Buzz)obj1).call1();	
19	System.out.println(foo2.name);	
20	System.out.println(((Bux)foo2).name);	

Task 10

1	public class Caramel extends SilkOreo{
2	String texture = "Softy";
3	public void method1() {
4	System.out.println("Caramel m1");
5	}
6	public void method4() {
7	System.out.println("Caramel m4");
8	}
9	public String toString(){
10	method2();
11	return "Caramel is "+ texture;
12	}
13	}
14	public class Chocolate{
15	String texture = "Chocolaty";
16	public void method1() {
17	method2();
18	System.out.println("Chocolate m1");
19	}
20	public void method2() {
21	System.out.println("Chocolate m2");
22	}
23	public String toString(){
24	method2();
25	return "Chocolate is "+ texture;
26	}
27	}
28	public class DairyMilk extends Chocolate{
29	String texture = "Yummy";
30	public void method2() {
31	System.out.println(this.texture);
32	System.out.println("DairyMilk m2");
33	}
34	public void method3() {
35	System.out.println("DairyMilk m3");
36	}
37	}
38	public class KitKat extends Chocolate{
39	String texture = "Crunchy";
40	public void method1() {

41	System.out.println("KitKat m1");
42	}
43	public void method4() {
44	System.out.println("KitKat m4");
45	}
46	public String toString(){
47	method2();
48	return "KitKat is "+ texture;
49	}
50	}
51	public class SilkOreo extends DairyMilk{
52	String texture = "Silky";
53	public void method1() {
54	super.method1();
55	System.out.println("SilkOreo m1");
56	}
57	public void method3() {
58	System.out.println("SilkOreo m3");
59	System.out.println(this);
60	}
61	}

Assuming the following variables have been defined:

```
Chocolate choco1 = new Chocolate();
KitKat kit = new KitKat();
DairyMilk dairyMilk1 = new DairyMilk();
DairyMilk dairyMilk2 = new SilkOreo();
Object obj1 = new DairyMilk();
Object obj2 = new KitKat();
Chocolate caramel1 = new Caramel();
```

In the table below,

- The output produced by the statement in the left-hand column, should be written in the right-hand column
- If the statement produces more than one line of output, indicate the line breaks with slashes as in "a/b/c" to indicate three lines of output with "a" followed by "b" followed by "c".
- If the statement causes an error, fill in the right-hand column with either the phrase "compiler error" or "runtime error" to indicate when the error would be detected.

	Statement	Output
1	choco1.method1();	
2	dairyMilk1.method1();	
3	dairyMilk2.method4();	
4	caramel1.method1();	
5	System.out.println(caramel1);	
6	System.out.println(caramel1.texture);	
7	((Chocolate)kit).method2();	
8	((SilkOreo)dairyMilk2).method3();	
9	((DairyMilk)kit).method2();	
10	((Chocolate)kit).method3();	
11	((Chocolate)dairyMilk2).method1();	
12	((Chocolate)obj1).method2();	
13	((Caramel)obj1).method2();	
14	((SilkOreo)obj2).method3();	
15	System.out.println(((Object)choco1).toString());	
16	System.out.println(((Chocolate)kit).texture);
